

Bainbridge-Guilford CSD

Dear Parents/Guardians:

The Centers for Disease Control (CDC) has indicated that influenza is widespread at this time of year. While a shift in the strain of flu this year has resulted in more vaccinated people than usual developing flu, vaccination still has been shown to lessen the risk for serious illness and hospitalization should one develop the flu. Very young children and those with chronic illness are at highest risk. Vaccinating others who care for vulnerable children can lessen the risk of illness. Of importance, especially in the very young, the very old, and people with chronic medical conditions, if the flu strikes it is best to check with your health care provider early to assess whether anti-viral medications will be useful to reduce the risk of severe complications from the flu.

This is also to remind you of the continued availability of the influenza vaccine that you can get through your health care provider or at flu clinics and pharmacies this year. Chenango County Public Health also stresses the importance of the flu vaccination. They are still offering the vaccine. It is given free to children and the cost is \$17.00 for adults. You may contact Public Health at 337-1660.

As you are aware, influenza remains an annual illness that is generally preventable by yearly vaccination. One year's vaccine does not give lasting protection for the coming year's flu viruses.

Flu season generally runs between November and May each year, but most cases of flu illness occur in January, February, and less so March. It takes about 2 weeks to develop protection following the flu vaccine. The recommendation from the CDC is that all people who do not have allergies to components of the vaccine get the vaccine early in the fall when it becomes available, but if you missed it then, please consider it now.

The district wants to encourage you also to have plans in place should you have need for extended childcare in the event your child is ill and cannot attend school. As always, please remind your children of the importance of frequent and good hand washing, good respiratory hygiene to cover coughs and sneezes and prompt disposal of used tissues, and of not sharing personal items with others. Please keep ill children home from school until they are well enough to attend a full day of school without fever reducing medicines, and do remember to call in your child's absence with the reason for absence. Thank you for your cooperation and stay healthy!
